

Explorium Product Partnership Proposal

April 2026

Explorium Expands Madison Logic's Product Value

- **Madison Logic has the activation engine customers already pay for and a trusted brand for quality targeting and lead generation.**
- **The Explorium Value-Add:**
 - **Monetizable data layer as a new source of revenue.**
 - **Richer context for everything in platform supports retention and price increase**
 - **Clear next action for users sets the path for full automation**
 - **Strong team accelerates product development delivering roadmap faster**
 - **Future-proof for enterprise customers bringing their agents as users**
- **Together we can build products customers will pay for and make Madison Logic's offering more competitive with tech-forward ABM players.**

Strategic Product Initiatives

1. **Audience Builder & Enrichments**
2. **Opportunity Intelligence & Analytics**
3. **Content & Campaign Intelligence**
4. **Next-Gen ML Models**
5. **Agentic Workflows & Access**

Pillar 1: Launch Audience Builder as a New Product

- **Bring audience creation inside Madison Logic so customers can build target-account and stakeholder audiences from rich data, not just imported lists**
- **Enrichments on leads and targets to refine stakeholder audiences inside target accounts**
- **Turn audience building into direct revenue and stronger downstream performance**

Example: “Find EMEA software companies with AI infrastructure intent, non-tier-1 cybersecurity provider in stack, engineering hiring growth, and recent security incident for those find all engineering leadership.”

Pillar 2: Richer Opportunity Intelligence Everywhere

- **Extend existing analytics and account views so they answer not only 'what happened' but 'why it matters now'**
- **Add actionable dimensions customers can use to segment and diagnose performance**
- **Move from static reporting to AI-driven guidance on what to do next. Generate specific, data-backed recommendations for the best next actions.**
- **Package this as premium Opportunity Intelligence, not just richer dashboards**

Example: segment by cloud maturity, growth vs. efficiency posture, buying group completeness, website messaging changes toward compliance or resilience, or department-level workforce expansion

Pillar 3: Next-Gen ML Models Fueled by Rich Context

- **Madison Logic's existing signals become materially more valuable when models can learn from broader external context**
- **Expand external signals not just as enrichments but also as features in a more inform ML model while keeping outputs explainable to marketers and sales**
- **Evolve from one broad score to multiple scores tied to real buyer use cases:**
 - Opportunity Confidence Score
 - Buying Group Coverage Score
 - Message Fit Score
 - Channel Fit Score
- **Use model outputs to drive budget, targeting, and play selection**

Example: "Model top drivers: active buyer research, stack fit, engineering growth, and a recent data platform partnership"

Pillar 4: Content & Campaign Intelligence

- Correlate content performance with role, account context, and channel to understand What Resonated, With Whom, and Why
- Use recent events and website change signals to understand the story the account is telling the market right now.
- Generate LLM-based data-driven outlines for new assets and landing pages
- Recommend language and visualization types, not just topics

Example: “A shift in website messaging toward compliance, resilience, or platform consolidation can guide a landing page’s headlines, proof points, CTAs, and visuals”

Pillar 5: Insights Agent and Enterprise Agents Access

- Introduce an Insights Agent as the first agent customers will use
- Use the agent to create dynamic charts and explanations and go beyond pre-built dashboards to actual recommendation
- Pair that with Madison Logic's upcoming campaign creation and campaign operations automation direction
- Explorium expertise in serving agents as users future-proof the platform for where enterprise software is going

Example:

"Q: Analyze financial sector results and suggest improvements to my campaigns.

"A: Based on engagement patterns in the financial sector:

1. Expand content on financial services security risks.
2. Increase focus on CISO audiences with tailored messaging.

Thank You
